Bein sports xfinity

Xfinity Mobile is built around a simple idea – if you're already getting cable, internet or home phone service from Comcast, why not throw in cell phone service too? It turns out that many people are willing to take Comcast on that offer. Launched in 2017, Xfinity Mobile has grown to 2.4 million subscribers since August 2020. That rapid growth didn't happen because Comcast started erecting its own cellular towers. On the contrary, Xfinity Mobile is a mobile virtual network operator (or MVNO), which piggybacks on the existing network of one or more of the major airlines. (In the case of Comcast, that's Verizon's network - including 5G coverage - combined with the Internet service provider's own Wi-Fi hotspots.) For wireless customers, getting service from an MVNO can sometimes mean a better deal than what you'd get from a major carrier, while still enjoying the same great coverage (although your speed can be detracted – that means delayed – if there's a lot of traffic on the network). With Xfinity Mobile, it's all about bundling, just like Comcast's other services. In fact, you're not even eligible for Xfinity Mobile if you're not doing business with Comcast yet, or are willing to make the company your Internet service provider. Meet those criteria, and Xfinity Mobile service can be yours, with unlimited talk, text and data costing you only \$45 per month. Should you turn to Comcast for your mobile service? Here's a look at the rest of the details to see if Xfinity Mobile is right for you. Xfinity Mobile fast facts

- Available plans include performance (1GB starts at \$15 per month) or unlimited data (\$45 per month).
- The more data gig customers buy, the less each extra GB costs.
- You must have Xfinity internet to sign up for Xfinity Mobile.
- Service is delivered through Verizon's towers and Comcast's network of Xfinity hotspots.
- Xfinity Mobile now supports 5G on Verizon's network, but you'll need a 5G phone to use it. Xfinity Mobile is available exclusively to Comcast subscribers. The wireless service depends on Verizon's network (the clear winner in our fastest wireless network testing), along with access to Xfinity Wi-Fi hotspots nationwide. If you subscribe, you choose between an unlimited data plan and pay only for the data you use. Unlimited nationwide calls and text are included, regardless of your choice of data. Xfinity Mobile users do not pay access fees for up to five lines. (Some carriers charge subscribers as much as \$20 per line in access fees on top of their regular monthly data plan rate, but for unlimited plans, those access fees are often baked into the monthly rate.) Comcast TV Subscribers Can Access the Xfinity Stream TV App use the smartphone to stream live TV, on-demand content, and programs stored on a cloud DVR, wherever they are; it will count for your data allocation, though, if you don't have an unlimited subscription with the carrier. (More on that in a moment.) (Image credit: Xfinity Mobile Mobile Verizon's LTE network with Comcast's Wi-Fi hotspots. (Credit: Comcast))

For the most part, Xfinity Mobile works just like any other wireless carrier. The two most notable differences are that you need to maintain a Comcast subscription, and your connection is automatically transferred to a Comcast Wi-Fi hotspot when it's within reach. (There's a pretty good chance that one will be – Comcast told us a while ago that it has 19 million hotspots across the country.) Using Wi-Fi instead of a cell tower should typically represent a boost in speed, and if you're not on the unlimited data plan, you'll save data costs. (Several other low-cost providers, such as Republic Wireless and TextNow, use this Wi-Fi/cellular approach). Xfinity Mobile: How much it costs The prices of Xfinity Mobile range from \$15 per month to \$60 per month, depending on the options you choose. Please note that these do not include taxes and fees, which will vary from state to state. The bare minimum \$15 plan will get you 1GB of data, along with unlimited talk and text. If you go beyond 1GB, you'll be charged an extra \$15 per GB. Comcast rounds off, so 2.1GB or 2.9GB of data usage would both be treated as 3GB, and cost you \$45. Last year, Xfinity modified the Gig for new customers who share the same bucket of data across multiple lines. Under the new system, choose the amount of data you want to use in advance, with lower costs for the more data you use. For example, while 1GB normally costs \$15, 3GB costs \$30 and 10GB is only \$60. By the Gig plans include video streaming at HD resolution and LTE hotspot speeds. A Data Saver feature lowers the video resolution to 480p and slows hotspot speeds to 600 kbps, all in the name of preventing you from exceeding your data limit and making a higher monthly bill than you expected. Xfinity Mobile: from \$15/month for 1GB Available to Comcast customers only, Xfinity Mobile offers both by acting and unlimited plans. The former starts at \$15/month for 1GB, while the latter costs \$45 per line/per month. Even better, get a free \$50 prepaid card when you take your phone to Xfinity Mobile. View Deal (Image credit: Comcast) Xfinity Mobile's unlimited subscription costs \$45 per month. There are no discounts for adding additional rules, as some carriers offer for families. Like other providers, Xfinity will slow down your speeds if you have a certain amount of data - 20GB for a month in this case. That is lower than the thresholds of the major carriers. Verizon's Play More and Do More Plans will only slow down data speeds if you get more than 25GB or 50GB per month, respectively, although these plans also cost \$35 more than what Xfinity Mobile charges. Unlimited subscriptions limit the up to 480p when streaming via mobile. Hotspot speeds are also capped at 600 kbps. If you want HD video at all times, you pay an extra \$20 per month. Subscribers have the ability to move between the By the Gig plan and unlimited plan at any time without penalty, so if you just have occasionally heavy-data-usage month you could make the switch when needed. If you choose Xfinity Mobile, you'll need to enable two-factor verification for your account and get a PIN associated with your account, because some customers have reported that their mobile numbers have been hijacked. Xfinity Mobile offers attractively priced subscriptions compared to the best unlimited data plans from the major providers. Your cheapest unlimited subscription option at T-Mobile costs \$60 per month for the carrier stripped Essentials plan. AT&T customers pay \$65 per month for Unlimited Starter. So you'll save \$15 to \$20 just using Xfinity Mobile and the unlimited data plan. Some rival MVNOs charge less for unlimited data - at Visible, which also uses Verizon's network, you pay only \$40 a month for unlimited data including taxes and fees. Mint Mobile goes even cheaper at \$30 a month, but to get that rate, you have to commit to a year of service. Xfinity Mobile's price advantage disappears as you add more lines, as the best family cell phone plans discount per line prices the more lines you have. A family of four would pay \$120 a month for unlimited data through the T-Mobile Essentials plan, while that same family would be on the hook for \$180 at Xfinity Mobile. (Xfinity would prevent you from

mixing and matching different lines, allowing some members of your family to get unlimited data while allowing users with lower data to pay with the gigabyte. That approach can lower your monthly bill.) Xfinity Mobile's per gigabyte pricing is more generous than some of its fellow MVNOs, but it's not the lowest price you'll find. For example, at Tello, you'll now pay \$19 a month for 4GB of LTE data, \$11 less than what Xfinity now charges for 3GB of data. Google Fi charges \$10 for every gigabyte of LTE data on top of \$20 for talk and text, but instead of rounding up once you pass a particular gigabyte mark, you'll be charged \$1 for every 100MB. (Using 2.1GB would cost \$21, for example, as opposed to \$30 on Xfinity.) And, of course, none of these services require you to get your cable or Internet from Comcast.Xfinity Mobile: What about 5G? The Verizon 5G network launched in 2019, so it was only a matter of time before MVNOs like Xfinity Mobile could use the faster 5G service. Xfinity Mobile 5G service went live in May, and the good news is you don't have to pay extra for the faster service. It is included with regularly priced Xfinity Mobile plans. That means Xfinity customers who pay \$45 a month for unlimited data get access to 5G for about half the cost of what Verizon customers pay. (Verizon contains 5G with its Play and Do More unlimited plans, which start at \$80 for a single line; the \$90-a-month Get More subscription also includes 5G.) There are some caveats to Xfinity Mobile's 5G service. First you need a 5G ready-made phone. Until recently, the only 5G models available through Xfinity were pricey, such as the Samsung Galaxy S20 5G UW from \$999 and \$1,299 Samsung Galaxy Note 20 20 Fortunately, that's slowly changing, as cheaper options like the \$649 Galaxy A71 5G are becoming more common, and Apple's 5G-ready iPhone 12 lineup is available through Xfinity.Verizon 5G now reaches coast to coast, affecting 2,700 cities and cities, although those speeds aren't much faster than LTE. To get high-speed mmWave, you should be in one of the cities where Verizon has installed the high-speed service – Verizon's on track to have mmWave implemented in parts of 60 cities by the end of 2020.Xfinity Mobile: No contract requires You to cancel your Xfinity Mobile plan within 30 days of your next billing cycle date and you are only responsible for the current month's cost on your account and any remaining device payments that you might have. In the first 30 days you cancel and return your device for a full refund, minus a stock fee of \$35. After 30 days, you would be responsible for the resupply fee and any outstanding costs on the device. Xfinity Mobile: Which devices are supported? Device selection was the biggest drawback of Xfinity Mobile, which largely sells top flagships. However, in recent years Xfinity has broadened its selection of Android devices, and now users can bring some of these handsets to the network as well.iPhone users will notice an up-to-date selection. You choose one of the new iPhones - the iPhone 12 mini, iPhone 12, iPhone 12 Pro and iPhone 12 Pro Max, with Xfinity offering discounts on all four models from this writing. You also save money by buying the iPhone 11, iPhone XR or iPhone SE 2020. Whether the iPhone 12 Pro Max or iPhone 12 Pro can be held at Xfinity Mobile. (Image credit: Future) As for Android devices, both the Galaxy S20 and Note 20 models are available on Xfinity. The Pixel 4a 5G is also there, if you want to spend less on a 5G-ready device. You'll find a pair of handsets available for less than \$200 - the Moto E and LG K51. Device payment options and fixed prices are both well compared to other carriers, so while the need to buy a new device is tricky, you have at least solid options at reasonable prices. If you prefer to bring your own phone, let Xfinity iPhone users bring their own device, provided it's an iPhone 6 or newer. The company is now also attempting to include Android users, although Byod service is currently limited to selected Samsung and Pixel models. If you have a supported phone, send away a free Xfinity SIM card and log in as soon as you receive it to activate your account. In addition to other mobile accessories such as case and charging pads, Xfinity Mobile also sells tablets (all iPad models) and smartwatches (all Apple Watches). You pay \$10 per line per month for an Xfinity Mobile subscription for Devices. Xfinity Mobile: Cancel your serviceUnfortunately, don't cancel you online. You must call 888-936-4968 earlier to cancel your Xfinity Mobile service. There are no fines for cancelling your service, but you must cancel on 30 days before the start of a billing cycle to avoid charges for the next month, and you're responsible for any outstanding payments on your devices. Is Xfinity Mobile worth it? It depends on your situation, but for some customers, Comcast's mobile service seems to be a solid value, especially for some users who want unlimited data, especially now that Xfinity throws in 5G coverage on top of its regular service. Families would benefit from the multi-line discounts offered by other providers, but if some members of your family use less data, you'll turn to Xfinity Mobile's by-the-gigabyte prices. (Verizon and Sprint offer similar flexibility by giving you mix-and-match different layers of its unlimited plan.) Users who can get by at just 1 or 2 GB of data per month would probably also do well on Xfinity Mobile. But as mentioned above, the more data you use at Xfinity Mobile, the less attractive the service becomes compared to the best prepaid phone plans. Xfinity Mobile is more attractive now that you bring your own phone to the service, although Android users need to have very specific Samsung or Google phones to take advantage of that feature. Use Xfinity Mobile when traveling to other countries, although you'll be charged for calls, text, and data. (Rates vary by country.) In other words, there are better international data plans.
